

Biofinity[®] toric multifocal

Designed to keep up with your evolving vision needs.

You've corrected your astigmatism but found focusing on objects close-up has become more of a struggle.

This could be a sign of presbyopia, which affects most people over the age of 40. Presbyopia can make up-close objects appear blurry. To help improve your vision, you'll need a new solution for your vision correction.

You may have worn toric lenses to correct your astigmatism but there is now a solution to address presbyopia as well.

CooperVision[®] Biofinity[®] toric multifocal contact lenses combine proven lens design technologies to help keep up with your evolving vision needs.

Replacement Schedule

 Monthly

Corrects

-  Astigmatism
-  Presbyopia

The features you'll love

- Optimized Toric Lens Geometry[®] incorporates special design features to provide predictable orientation and stable fit for consistently clear vision.
- Balanced Progressive[™] Technology provides multiple correction zones in each lens that are tailored to your personal prescription, so you can see clearly at all distances.
- Aquaform[®] Technology locks moisture inside the lens and allows high breathability to provide incredibly long-lasting comfort.
- All Biofinity contact lenses provide a remarkable balance of comfort, breathability and excellent visual performance.
- Made to order, with over 200,000 prescription options to fit your specific prescription needs¹
